Background of the Invention

[0002] Genome and expressed sequence tag (EST)
projects are rapidly cataloging and cloning the genes of
higher organisms, including humans. The emerging
challenge is to uncover the functional roles of the genes
and to quickly identify gene products with desired
properties. The growing collection of gene sequences and
cloned cDNAs demands the development of systematic and
high-throughput approaches to characterizing the gene
products. The uses of DNA microarrays for
transcriptional profiling and of yeast two-hybrid arrays
for determining protein-protein interactions are recent
